

Australian Lining Company Pty Ltd

FOUNDING MEMBER OF THE IAGI
(INTERNATIONAL ASSOCIATION OF GEOSYNTHETIC INSTALLERS)

MINING APPLICATIONS

Professional, competent, experienced and highly trained geomembrane installation company capable of installing flexible linings to a variety of different applications and with varying degrees of complexity.

Today's mining industry has the benefit of using specialised geomembrane installation companies to meet their needs for secure containment systems to maximise productivity as well as meeting stringent environmental laws. ALC specialises in the supply and installation of HDPE (High Density Polyethylene) liners used in the mining industry for Heap Leach Pads, Tailings Dams, Effluent Ponds, etc. Polyethylene geomembrane liners are used as a secure impermeable flexible barrier to prevent contamination of the soil, ground water and environment by the chemical extraction solutions used in these mining methods, as well as the recapturing and recycling of the solution. The geomembrane materials used provide a strong, durable, chemical resistant lining system.

Protecting the environment and providing containment since 1980
